The invention relates to amplifying for RNA in a sample comprises eliminating single-stranded oligonuclectide from the transcription sample. The method involves synthesizing single-stranded cDNA by incubating the sample RNA with reverse transcriptase and an oligonuclectide primer that primes synthesis in a direction toward 5' end of the RNA; converting the single-stranded cDNA into double-stranded cDNA to form a transcription sample containing a cDNA template; eliminating single-stranded oligonuclectide from the transcription sample; and transcribing the cDNA template into RNA using an RNA polymerase. The method is useful for improving RNA polymerase based RNA transcription from a polymuclectide template. The method is useful for improving RNA in the transcription reaction. The present sequence represents an oligonuclectide used to exemplify RNA transcription in the presence of single- and double-stranded

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylglutaryl-Coenzyme A (HWG-COA) reductase, and inhibits the expression of HWG-COA reductase. The novel compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compounds can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HWG-COA reductase, such as a cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and dispositios for modulating the expression of HWG-COA reductase. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New compounds, particularly antisense oligonucleotides targeted to nucleic acid encoding HMG-CoA reductase, useful for treating atherosclerosis, or a disease involving cholesterol metabolism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diagnostics for modulating the expression of HMG-COA reductase. This polynucleotide sequence represents an antisense oligonucleotide of the

```

The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylglutaryl-Coenzyme A (HMG-CoA) reductase, and inhibits the expression of HMG-CoA reductase. The novel compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compounds can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating disease or condition associated with HMG-CoA reductase, such as a cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-CoA reductase. This ulayHUBLICE FOR MOGULATING THE EXPRESSION OF HMG-COA reductase. This polymuclectide sequence represents an antisense oligonuclectide of the forestime.

                                                                                                                                                                           The invention relates to novel compounds of 8-80 nucleobases in length targeted to, and which specifically hybridises with, a nucleic acid molecule encoding 3-hydroxy-3-methylgluttaryl-Coenzyme A (HWG-COA) reductase, and inhibits the expression of HWG-COA reductase. The novel compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compound can be used to treat disorders by antisense gene herapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HWG-COA reductase, such as a disease or condition associated with HWG-COA reductase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     compounds have cardiant, antiarteriosclerotic, and antilipaemic activities. The compound can be used to treat disorders by antisense gene therapy. The compounds, compositions and methods are useful for treating a disease or condition associated with HMG-COA reductase, such as a cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-COA reductase. This
                                                             cardiovascular disorder e.g. atherosclerosis, or a disease or condition involving cholesterol metabolism. They are also useful in research and diagnostics for modulating the expression of HMG-COA reductase. This polynucleotide sequence represents an antisense oligonucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New compounds, particularly antisense oligonucleotides targeted to nucleic acid encoding HMG-CoA reductase, useful for treating atherosclerosis, or a disease involving cholesterol metabolism or

                                                                                                                                                                                                                                                       is selectively promoted, based on their affinity, and the degree of dispersion of the complex formed between the specimen molecules and the probe molecules is detected and analysed. The probe molecules are capabl of producing fluorescence. This polynucleotide sequence represents an oligo used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Yamashita

The invention relates to a polyalkyleneamine-containing oligomeric compound (OC). Also described is a compound (C) comprising an oligomeric part, a fusogenic part, and a targeting part; and enhancing the cellular uptake of OC, by conjugating OC to a fusogenic part. In (C), the fusogenic part is covalently linked to the oligomeric part. The targeting part is covalently linked to the oligomeric or fusogenic part, where the fusogenic part is a lipophilic polyamine, polyethylenimine, polyalylamine, fusogenic peptide, oligomeric imidazole, histidine, pyridine, hydroxylamine, substituted hydroxylamine, hydrazine, substituted hydroxylamine, thiourea or imine. The targeting part is a ligand substituted hydrazine, thiourea or imine.
                                                                                                                                                                                                                                                                                                                                                   substituted hydrazine, thiourea or imine. The targeting part is a ligand that binds to a cellular reporter, where the targeting part is transferrin, folate, epidermal growth factor, nerve growth factor, insulin, alpha-fetoprotein, galactose, galactosemine, lactose, mannose, a polyclonal antibody, monoclonal antibody, vitamin B12, ibuprofen, cholesterol, low-density lipoprotein, peptide comprising an arginine-glycine-aspartic acid sequence. The oligomeric part is an oligonuclectide, and oligonuclectide analogue, a peptide nucleic acid or a peptide nucleic acid analogue. OC is useful as a prodrug, useful in diagnostics, therapeutics and as research reagents and kits. OC is useful for preventing or delaying infection, inflammation or tumour formation in organisms. The present sequence represents an oligonuclectide used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel polyalkyleneamine-containing oligomeric compound useful for preventing or delaying infection, inflammation or tumor formation
                                                                                                                                                                                                                                                                                       Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a polynucleotide isolated from a gene and is useful for detecting a single nucleotide polymorphism human gene or for diagnosing of disease. The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.

  The present invention relates to an oligonucleotide anti-sense to e initiation codon, coding region with 2-10 nucleotides of 5'-end and end of nucleic acid target comprising gene(s) chosen from e.g. interleukin (IL)-4 receptor, IL-5 receptor or salts of the oligonucleotide and optionally surfactant operatively linked to the oligonucleotide. The method is useful for preventing or treating a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a polynucleotide isolated from a human gene and is useful for detecting a single nucleotide polymorphism in a human gene or for diagnosing of disease. The invention enables the detection of a single nucleotide polymorphism in a human gene. The present sequence represents a primer of the invention.
                                                                                                                                                                                                                                                Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codons and introns of respiratory disease-relevant genes CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             interleukin; IL-4 receptor; IL-5 receptor; lung disea airway inflammation; allergy; asthma; impeded respira cystic fibrosis; acute respiratory distress syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Oligonucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel

The oligonucleotide is useful for production of a medicament for the prevention and/or treatment of a respiratory or lung disease. The respiratory or lung disease is chosen from airway inflammation, allergy(ies), asthma, impeded respiration, cystic fibrosis (CP), chronic obstructive pulmonary diseases (COPD), allergic rhinitis (AR), acute respiratory distress syndrome (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway obstruction. The present sequence represents an oligonucleotide of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel method for detecting a nucleic acid CC having at least two portions comprising contacting the nucleic acid with CC at least two types of nanoparticles, such as gold, having attached CC oligonuclectides and observing a detectable change brought about by hybridisation of the oligonuclectides on the nanoparticles with the nucleic acid. The method of the invention may be useful for detecting a nucleic acid, preferably viral RNA or DNA, bacterial DNA, a gene CC associated with a disease, a fungal DNA, synthetic DNA or RNA, a structurally modified natural or synthetic DNA or RNA or a product of a polymerase chain reaction amplification. The detected nucleic acid may be utilised for diagnosis of disease, sequencing of nucleic acids to based on CC utilised for diagnosis of disease, sequencing of nucleic acids; based on CC observing a colour change with the naked eye and is cheap, fast, simple, cand robust, requiring no specialised or expensive equipment. The current sequence is that of the oligonuclectide which is related to a thiol-modified oligonuclectide-gold colloid conjugate probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The invention relates to a novel method for detecting a nucleic acid CC having at least two portions comprising contacting the nucleic acid with CC at least two types of nanoparticles, such as gold, having attached CC oligonucleotides and observing a detectable change brought about by hybridisation of the oligonucleotides on the nanoparticles with the CC nucleic acid. The method of the invention may be useful for detecting a CC nucleic acid, preferably viral RNA or DNA, bacterial DNA, a gene CC associated with a disease, a fungal DNA, synthetic DNA or RNA, or CRNA, bacterially modified natural or synthetic DNA or RNA or RNA or CRNA or a product of a CC polymerase chain reaction amplification. The detected nucleic acid may be utilised for diagnosis of disease, sequencing of nucleic acids, CC forensics, paternity testing, cell line authentication and monitoring CC gene therapy. The method for detecting the nucleic acids is based on CC observing a colour change with the naked eye and is cheap, fast, simple, CC and robust, requiring no specialised or expensive equipment. The current CC sequence is that of the synthetic thiol-modified oligonuclootide-gold CC colloid conjugate probe of the invention which is linked via a thiol CC group to a gold nanoparticle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-APR-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc to, and which specifically hybridises with a nucleic acid molecule cencoding endothelial differentiation gene 1 (EDG1, a G protein coupled CC receptor, involved in development, wound healing, tissue regeneration, CC cellular proliferation, apoptosis, cancer, angiogenesis and CC inflammation), and inhibits the expression of EDG1, i.e. is an antisense CC (AS) oligonuclectide. Also included are a composition comprising the CC compound and a carrier or diluent and a method for screening an antisense CC compound (by contacting a preferred target region of a nucleic acid conjecule encoding EDG1 with one or more candidate antisense compounds CC comprising at least an 8-nucleobase portion that is complementary to the CC preferred target region and selecting for one or more candidate antisense compounds that inhibit the expression of a nucleic acid encoding EDG1). The compound, composition and methods are useful for treating a disease cor condition associated with EDG1, such as a hyperproliferative disorder, CC developmental disorder or a disease or condition arising from aberrant CC encountering the expression of EDG1. Experimental protocols are described but no results are given. The present sequence is a target region of the human cDNA for EDG1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                        Ś
                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a compound 8-80 nucleobases in length targeted CC to, and which specifically hybridises with a nucleic acid molecule concoding endothelial differentiation gene 1 (EDG1, a G protein coupled receptor, involved in development, wound healing, tissue regeneration, cellular proliferation, apoptosis, cancer, angiogenesis and inflammation), and inhibits the expression of EDG1, i.e. is an antisense compound and a carrier or diluent and a method for screening an antisense compound (by contacting a preferred target region of a nucleic acid molecule encoding EDG1 with one or more candidate antisense compounds comprising at least an 8-nucleobase portion that is complementary to the compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of a nucleic acid encoding EDG1). The compounds that inhibit the expression of an antising from aberrant condevelopmental disorder or a disease or condition arising from aberrant condulating the expression of EDG1. Experimental protocols are described but no results are given. The present sequence is an AS oligonucleotide cargeting human EDG1.
                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to phosphorothioate oligonucleotides having nucleoside with 240 modification are prepared by phosphitylating 5'-hydroxyl of a nucleic acid moiety having a nucleoside with 2' modification in an acetonitrile containing solvent mixture to form a phosphite intermediate; and oxidising the phosphite intermediate with an acetyl disulfide in an acetonitrile for a time to effect conversion of the phosphite intermediate to phosphorothioate. The invented method achieves high yields and greater efficiency. The present sequence is sulphurised oligonucleotide used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Preparation of phosphorothioate oligonucleotides involves oxidizing phosphite intermediate with acetyl disulfide in acetonitrile for time to

The invented method achieves high yields and greater efficiency. The present sequence is sulphurised oligonucleotide used in the exemplification of the inventic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 20 BP; 0 A; 0 C; 0 G; 20 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Preparation of phosphorothicate oligonuclectides involves oxidizing phosphite intermediate with acetyl disulfide in acetonitrile for time effect conversion of phosphite intermediate to phosphorothicate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cole DL,
 Novel intercalator, useful as electrochemical double stranded DNP

The intercalator of the invention may be useful for the electrochemical detection of a gene, as an electrochemical double stranded DNA detection reagent and as an intercalator for inhibiting the influence of mismatch DNA and single stranded DNA. The intercalator enables the transmission of electronic transition between two base pairs to occur efficiently. The current sequence is that of the electrochemical detection intercalator-related DNA 2 of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       phosphorothicate; 2' MOE; breast cancer; dyslipidaemia; atherosclerosis; low HD; high density lipoprotein; high LD; hypercholesterolaemia; gall stone, tridlyceridaemia; obsetty; hepatitis; hepatocellular carcinoma; aromatase; cytostatic; antilipaemic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LNHI) and splice variants content to the expression of liver related homologue-1 (LNHI) and splice variants content to the protein content to compositions 8-30 nucleobases in confocule encoding LNHI (also known as NRSA2). LNHI is a monomeric orphan conclear receptor protein that functions as a tissue specific confocule encoding that comprise at least one modified internucleoside coligonucleotides that comprise at least one modified sugar moiety. In this protein composition to the modified sugar moiety of a 2'-O-methoxyethyl (2' MOB) and at least one modified sugar moiety. Confoculated that compositions are useful for treating or diagnosing a disease associated with LNHI, such as breast cancer, conditions, atheroscolerosis, low HDI (high density lipoprotein), high consitions, atheroscolerosis, low HDI (high density lipoprotein), high consitions, atheroscolerosis, low HDI (high density lipoprotein), high consitions, and as well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit controlic, antilifiammatory and virucidal activities. This coligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRHI protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cc length that target a portion of an active site on the nucleic acid comblecule encoding LRH1 (also known as NRSA2). LRH1 is a monomeric orphan cc nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense cc oligonucleotides that comprise at least one modified internucleoside cc linkage, a phosphorothioate linkage; at least one modified sugar moiety, cc a 2'-0-methoxyethyl (2' MOS) and at least one modified nucleobase, a 5-methylcytidine. These antisense compounds are useful for treating or cc diagnosing a disease associated with LRH1, such as breast cancer, cc diagnosing a disease associated with LRH1, such as breast cancer, cc dispositing a disease associated with LRH1, such as breast cancer, cc dispositing a disease associated with LRH1, such as breast cancer, cc dispositing a disease associated with LRH1, such as breast cancer, cc dispositis, atherosclarosis, low HDL (high density lipoprotein), high critical associated with aromatase well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit cytostatic, antilipaemic, antiarteriosclarotic, anorectic, hepatotropic, clitholytic, antiartiflammatory and virucidal activities. This collyonucleotide sequence is an antisense DNA oligo used to modulate the cypression of the human LRH1 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                 This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRHI) and splice variants of thereof. Specifically, it refers to compositions 8-30 nucleobases in clear receptor protein that trafers to compositions 8-30 nucleobases in collecule encoding LRHI (also known as NR5A2). LRHI is a monomeric orphan conclear receptor protein that functions as a tissue specific conclear receptor factor. The present invention describes antisense conjugated in factor. The present invention describes antisense conjugated in the state of the modified internucleoside confined, a phosphorothicate linkage, at least one modified nucleobase, a 5-confined, and the seasociated with LRHI, such as breast cancer, conjugated a disease associated with LRHI, such as breast cancer, conjugated and the seasociated with LRHI, such as breast cancer, conjugated and, atheroscolerosis, low HDI (high density lipoprotein), hypercholesterolaemia, gall stones, conjugated and the seasociated with aromatase activity. Accordingly, these compositions exhibit conjugated activity, antilipaemic, antistrateriosclerotic, anorectic, hepaticide sequence is an antisense DNA oligo used to modulate the corpression of the human LRHI protein of the invention.

ADJ18317/c
This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRHI) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in length that target a portion of an active site on the nucleic acid molecule encoding LRHI (also known as NR5A2). LRHI is a monomeric orphan nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense oligonucleotides that comprise at least one modified internucleoside linkage, a phosphorothioate linkage; at least one modified sugar moiety, a 2'-O-methoxyethyl (2' MOE) and at least one modified mucleobase, a 5-methyloytidine. These antisense compounds are useful for treating or diagnosing a disease associated with LRHI, such as breast cancer, dyslipidaemia, atherosclerosis, low HDI (high density lipoprotein), high LDI (low density lipoprotein), hypercholesterolaemia, gall stones,
                                                                                                                                                                                                                                                                              New antisense oligonucleotides targeted to a nucleic acid encoding related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             01-JUL-2003;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08-JAN-2004.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   phosphorothioate; 2' MOB; breast cancer; dyslipidaemia; atherosclerosis; low HDL; high density lipoprotein; high this, hypercholesterolaemia; gall stone; triglyceridaemia; obesity; hepatitis; the triglyceridaemia; obesity; hepatitis; hepatitis; hepatitis; antilipaemic;

Accordingly, these compositions exhibit cytostatic, antilipaemic, antiarteriosclerotic, anorectic, hepatotropic litholytic, antiinflammatory and virucidal activities. This oligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRHI protein of the invention.
                                                                                                                                                                                                                                                                                New antisense oligonucleotide for modulating endothelial expression, for diagnosing, preventing or treating e.g. high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19-JUL-2002; 2002US-0397106P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             18-JUL-2003; 2003WO-US022410

(ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipse in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are

The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                       The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense oligonucleotide for modulating endothelial lipase expression, for diagnosing, preventing or treating e.g. dyslipidemia, high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antilipaemic; Cardiovascular; Analgesic; Antianginal; Antisense therapy; Human; Endothelial Lipase; dyslipidaemia; high density lipoprotein; HDL; cardiovascular disorder; metabolic syndrome X; ss.

                                                                                                                                                                                                               The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antisense oligonucleotide for modulating endothelial lipase expression, for diagnosing, preventing or treating e.g. dyslipidemia, high density lipoprotein or cardiovascular disorders.

                                                                                                                                                                                                                                                                                                                                                            specifically hybridizes with and inhibits the expression of Navl.3. The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache, seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nav1.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.
Chimeric phosphorothicate oligonucleotide to target Nav1.3 #8196
                                   20-MAY-2004
                                                                                                                                                                                                                                                                                                                               Sequence 20 BP; 0 A; 0 C; 1 G; 19 T; 0 U; 0 Other;

The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neurolatia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothicate oligonucleotide with 2,MOE wings and a deoxy gap. Used during the antisense inhibition of human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nav1.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Navl.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navl.3. The compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, chabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epileps; or ataxia. The present sequence represente a chimeric phosphorothoate oligonucleotide with 2.7MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target of different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

The present invention relates to an antisense compound targeted to a controlled acid molecule encoding Navl.3, where the antisense compound controlled acid molecule encoding Navl.3. Where the antisense compound composition are useful for treating a disease or condition composition are useful for treating a disease or condition consequence associated with Navl.3, e.g. pain including but not limited to neuropathic pain, power back pain, court pain, lower back pain, court pain, pain from burns, migraine headache, cluster headache, mild-to-moderate controlled pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate controlled pain pain from burns, migraine headache, cluster headache, including the headache; satzure disorder such as childhood setzure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with constant and a deoxy gap. Used during the antisense inhibition of thuman Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 4; SEQ ID NO 2303; 417pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

WPI; 2004-203785/19.

New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.

Claim 4; SEQ ID NO 2223; 417pp; English.

The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Navl.3, where the antisense compound

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            compound and composition are useful for treating a disease or condition associated with Navl.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothoate oligonucleotide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                             associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with
                                                                                                                                                                                                                                                                                                                           The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nav1.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Chimeric phosphorothioate oligonucleotide to target Navl.3 #160

                                                                                                                                                                                                 nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, lower back pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonuclocide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human Nav1.3 expression, the oligonucleotides are designed to different regions of the human Nav1.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure
                                                                                                                   Sequence
                                                                                                                                                                            different regions of the human Navl.3 RNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to an antisense compound targeted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 4; SEQ ID NO 3255; 417pp;

                                                                                                                                                                                                                                                                                          The present invention relates to an antisense compound targeted to a nucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition associated with Nav1.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2'MOE wings and a deoxy gap. Used during the antisense inhibition of human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure

CC composition comprising the antisense compound, a method of inhibiting the CC expression of VCC-1 in cells or tissues comprising contacting the cells or tissues with the antisense compound and a method of treating a human CC having a disease or condition associated with VCC-1 comprising contacting a human CC daministering the antisense compound to an animal to inhibit expression CC of VCC-1. The antisense compound to an animal to inhibit expression CC of VCC-1. The antisense compound to an animal to inhibit expression CC of vCC-1. The antisense compound to an animal to inhibit expression CC of vCC-1. The antisense of phosphorothioate linkage. It also CC comprises at least one modified sugar moiety, preferably a 2'-O-CC methoxyethyl sugar moiety, and at least one modified nucleobase, CC specifically a 5-methylcytosine. The antisense compound is useful for CC treating a disease or condition associated with VCC-1, such as diabetes, CC an immunological disorder, a cardiovascular disorder, a neurological CC disorder, e.g. haemangioma, tumour angiogenesis, rheumatoid arthritis, CC antisense oligonucleotides may also be used for wound healing, for creating periodontal diseases, for gut protection of treating periodontal diseases, for gut protection of treating periodontal diseases, for gut protection of corresponsation, for treating periodontal diseases, for gut protection of corresponsation, for treating periodontal diseases, for gut protection of corresponsation of atrial fibrillation. This sequence represents an antisense coligonucleotide targeted to DNA encoding the human VCC-1 polypeptide of the invertion.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5° and 3° ends using the oligo-capping method. This oligonucleotide sequence is a human clone specific PCR primer used in an exemplification of the
  Clone specific PCR primer to amplify human full length cDNA SeqID 4269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New oligonucleotide primers length human cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             oligo-capping method; ss; PCR; primer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, encourage proteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This oligonucleotide sequence is a human clone specific PCR primer used in an exemplification of the

```
The invention relates to an isolated PRO polypeptide (secreted or curansmembrane protein) having at least 80% amino acid sequence identity co an amino acid sequence chosen from 94 fully defined sequence identity co an amino acid sequence from 14 fully defined sequence as given con the specification (including PRO lacking its associated signal captide). Also included are nucleic acids encoding the PRO proteins comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising comprising the vector and producing PRO, a chimaeric molecule comprising polypeptide is useful for detecting PRO337 polypeptide is useful for detecting PRO337 polypeptide is useful for detecting PRO337 polypeptide, and PRO739 polypeptide is useful for ilnking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for linking a compressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide; PRO735, a compressing PRO339 polypeptide; PRO337 compressing PRO339 polypeptide; PRO339 polypeptide; PRO339 p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                29-APR-1998; 98US-0083545P.

                                                                                                                                                                                                                                                                                                  The present invention relates to a method (M1) for detecting and/or isolating a nucleic acid having a homopolymeric sequence or repetitive element or conserved nucleotide sequence. (M1) comprises treating a sample containing nucleic acid compounds with an locked nucleic acid (LNA) oligonucleotide (LO) to thereby detect and/or isolate a nucleic acid having the homopolymeric sequence or repetitive element or conserved nucleotide sequence. (M1) is useful for detecting and isolating nucleic acids released from a lysed complex biological mixture comprising nucleic acids. The present sequence is a LNA oligomer, used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Detecting and/or isolating nucleic acid molecule having homopolymeric sequence or repetitive element or conserved nucleotide sequence involvereating sample containing nucleic acid compounds with locked nucleic acid oligonucleotide.
                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    20-JUN-2003; 2003WO-IB006354.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     modified_base

                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to reverse transcripting one or more nucleic acid molecules comprises incubating one or more nucleic acid templates in a buffer under conditions sufficient to make one or more first nucleic acid molecules complementary to all or a portion of the or more templates. The method is useful for reverse transcripting one more nucleic acid molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Reverse transcripting one or more nucleic acid molecules comprises incubating one or more nucleic acid templates in a buffer comprising least one reverse transcriptase and a mixture of random primers and oligo (d\mathbf{T}).
                                                                                                                                                                                            17-JUN-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Competide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector and producing PRO, an chimaeric molecule comprising the vector and producing PRO, a chimaeric molecule comprising CC PRO fused to a heterologous amino acid sequence, and an anti-PRO CC antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. CC polypeptide. PRO725, PRO700 or PRO739 polypeptide is useful for detecting PRO337 polypeptide. PRO7359 polypeptide and PRO1559 polypeptide is useful for detecting PRO337 polypeptide. PRO7359 polypeptide is useful for detecting CC pRO7359 polypeptide to a cell expressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide is useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide; and PRO725, CC pRO700 or PRO739 polypeptide are useful for linking a bloactive molecule to a cell expressing PRO337 polypeptide; and PRO359 polypeptide is collecule for linking a bloactive molecule for linking a bloactive molecule for linking a bloactive molecule for cell expressing PRO337 polypeptide; and PRO337 polypeptide is useful for linking a bloactive molecule for cell expressing PRO337 polypeptide; and PRO337 polypeptide is useful for modulating the cell expressing PRO337 polypeptide; where the cell is killed. PRO337 polypeptide or anti-PRO337 polypeptide, where the cell is killed. PRO337 polypeptide or anti-PRO337 polypeptide or anti-PRO337 polypeptide. PRO337 polypeptide is useful for modulating the bloactive to cell expressing PRO337 polypeptide. PRO337 polypeptide or anti-PRO337 polypeptide. PRO337 polypeptide. PRO337 polypeptide or anti-PRO337 polypeptide. PRO337 polypeptide. PRO337 polyp
                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method for inducing differentiation of mammalian embryonic stem (ES) cells into functioning cells. The method is useful for inducing differentiation of mammalian ES cells into functioning cells. The pancreatic islet-like cell clusters induced from allogenic ES cells are useful for treating a mammalian patient having disorders in pancreatic islet function, such as when the patient is a type I diabetic patient: The nerve-like cells induced from allogenic ES cells can be used for treating a mammalian patient having disorders in nerve function. The method is also useful in cell therapy. The present sequence is a reverse transcription (RT)-PCR primer used to amplify mouse carboxypeptidase-A cDNA. This sequence is used to illustrate the method of the invention

                                                                                                                                                                                                                   8
                                                                                                                                                                                                                                          The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1 in cells or tissues; and (3) a method of thibiting the expression of CC mpGES-1 in cells or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, and can the used as mpGES-1 inhibitors and in gene therapy. The antisense compound be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or condition associated with mpGES-1 is chaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                            Matches

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin R2 synthase; mpGES-1; mpGES-1 inhibitor; microsomal prostaglandin R2 synthase inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; immunomodulator; cardioric; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; immunological disorder;
                                  antidiabetic, immunomodulator, cardiant, neuroprotective, vasotropic, antiantifical ameliory, neuroprotective, nootropic, antiantification, vasotropic, antiantification, neuroprotective, nootropic, antiantification, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis diabetes, cancer, ischaemia or reperfusion injury, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.ginflammation, Alzheimer's disease, arthritis, diabetes, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens.

```

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to

25-SEP-2002; 2002US-0413549P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC 9934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonuclectides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's comphthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC manufacture, and (3) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleorides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and can can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 is cancer, ischaemia or reperfusion injury, or CC ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a chimeric antisense oligonucleotide cc targeted to human microsomal prostaglandin E2 synthase (mpCES-1). The Cc human mpGES-1 gene is located on chromosome 9, more specifically to CC 9934.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antisflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antistishestic, immunomodulatory and cardiovascular activities, and can CC be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC contained a contained and can composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition condition associated with mpGES-1 e.g., inflammation or reperfusion injury, or condition c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The present sequence represents a chimeric antisense oligonucleotide CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to CC 934.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antishense or condition; cardiant, neuroprotective, antishilamological, immunomodulator, cardiant, neuroprotective, cophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.

맑 श्

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissue; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucles and antisense compounds have cytostatic,

antiinflammatory, neuroprotective,

immunomodulator,

neuroprotective,

antiarthritic, vasotropic,

antidiabetic,
